PROFILE

Senior Frontend Engineer with 14 years of experience building complex production web applications, primarily with React and TypeScript. Strong background in frontend architecture, complex UI systems, accessibility, and end-to-end technical ownership, from architecture and reusable component systems to production launch.

Built products across fintech, healthcare, AI media, and Web3, including applications with 200+ React components, multi-language interfaces, complex financial workflows, and production accessibility scores up to 100/100 in Lighthouse. Previously led frontend delivery across a team of four engineers at ConsenSys while remaining hands-on.

TECHNICAL SKILLS

Core React · TypeScript · JavaScript · HTML5 · CSS3 · SCSS

Frontend Architecture & UI Frontend architecture · Component architecture · Design systems · Responsive UI · Theming · Semantic HTML · Internationalization (i18n) · Accessibility (WCAG / a11y)

Frameworks & Libraries React Router · Redux · React Context · TanStack Query · Next.js · Electron

Styling & Design Systems Tailwind CSS · Storybook · CSS architecture · Design tokens · Reusable component systems

APIs & Data REST · GraphQL

Build & Tooling Vite · Webpack · Babel · ESLint · Prettier · Git

Testing Vitest · Testing Library · jsdom

Web3 ethers.js · viem · wagmi · web3.js · EVM dApp integration · Wallet connectivity

AI-assisted Development Claude · Codex — implementation, refactoring, debugging, code analysis

Engineering Practice Code review · Technical mentoring · Client communication · Requirements analysis · Technical ownership

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer — Digital M.O.B.

Jul 2020 – Sep 2026 · Bucharest, Romania

Product engineering studio building complex applications for international clients and startups.

- Primary frontend engineer across multiple production products in fintech, AI, and Web3, typically working in teams of 5–10 engineers.
- Defined frontend architecture and implementation approaches while remaining hands-on with production code, debugging, refactoring, and code review.
- Built complex React and TypeScript applications with reusable component systems, responsive UI, theming, internationalization, and maintainable state-management patterns.
- Worked directly with clients to clarify requirements, evaluate technical options, and turn product designs into production applications.

SELECTED PROJECTS

DRE App (2026)

Global financial application for saving, spending, investing, and moving money internationally.

- Led frontend architecture and implementation across a complex 39-route React application.
- Built a 7-locale internationalization system with ~980 translation keys per locale.
- Added compile-time translation-key validation and CI parity checks to prevent missing-translation regressions.
- Integrated authentication, ERC-4337 account abstraction, and cross-chain routing across multiple blockchain networks.
- Current production Lighthouse accessibility score: 96/100.

Taunt Bet (2026)

Data-heavy prediction and betting platform with Solana integrations.

- Led frontend architecture and implementation across a complex React application.
- Built reusable UI and design-system foundations for the product.
- Established the frontend testing practice from scratch: 244 test cases across 17 Vitest suites.
- Integrated five Solana Anchor programs, including wallet-standard flows and wallet integrations.

Daisy (2025–2026)

Generative AI media suite for brand content creation.

- Built and maintained complex production UI in React and TypeScript.
- Worked on reusable component architecture, responsive UI, theming, and product workflows.
- Current production Lighthouse accessibility score: **87/100**.

Seek3rWallet (2022–2024)

Portfolio manager, browser-extension wallet, and peer-to-peer marketplace.

- Delivered much of the frontend independently.
- Built a 44-route application with a large reusable component system and 306 design tokens.
- Implemented light, dark, and system themes.
- Integrated EVM, Bitcoin, and ABlock chain families plus on/off-ramp and cross-chain tooling.

Orange Standard (2025–2026)

Financial platform focused on buying, saving, and borrowing.

- Contributed 224 commits and 72 pull requests within a 10-engineer team.
- Built education and portfolio experiences and contributed to a 157-token design system.
- Current production Lighthouse accessibility score: **87/100**.

Threshold Network / tBTC (2025–2026)

- Contributed to a dApp spanning EVM, Starknet, Sui, and Bitcoin.
- Worked on wallet integration and vault protocol integrations across multiple ecosystems.

Senior Frontend Engineer — Melio

Mar 2026 – Jun 2026 · Bucharest, Romania · Part-time alongside Digital M.O.B.

Preventive-healthcare startup providing personalized screening plans and laboratory-test interpretation for the Romanian market.

- Sole frontend engineer, taking the product from an initial visual direction to production launch in under four months.
- Designed the frontend architecture and reusable UI system and implemented the complete React and TypeScript application.
- Built five multi-step clinical flows spanning 47 screens, with responsive UI, light/dark theming, bilingual support, and accessibility.
- Contributed beyond the frontend to payment processing, laboratory-data imports, and backend implementation.

- Current Lighthouse scores: **100 Accessibility / 100 Best Practices / 100 SEO** for the public site and **92 / 100 / 100** for the authenticated application.

Senior Frontend Engineer — ConsenSys

Mar 2017 – Jun 2020 · Cluj-Napoca, Romania

- Led frontend delivery across a team of four engineers, combining hands-on development with technical coordination, mentoring, and client-facing consulting.
- Contributed to frontend architecture and technical decisions, reviewed code, and helped engineers resolve implementation challenges.
- Built production React applications with complex state management, reusable UI components, and offline-first capabilities.
- Delivered **Breaker**, an Electron desktop application, and **Tokit**, a rights-management gateway and project-creation application.
- Worked directly with clients on requirements analysis, technical solutions, and delivery planning.

EARLIER EXPERIENCE

Frontend JavaScript Engineer — MCRO

2016 – 2017 · Cluj-Napoca, Romania

- Built Uniqlo's mobile web application using React, including server-side rendering, Redux, GraphQL integrations, and API-driven interfaces.
- Configured and optimized Webpack and Babel tooling.
- Contributed to requirements analysis and client communication.

Stack: React · JavaScript · Redux · GraphQL · Webpack · Babel · CSS / SCSS

Frontend JavaScript Engineer — AROBS Software

2013 – 2015 · Chişinău, Moldova

- Developed web applications and a rights-management platform for Warner Music Group using JavaScript, AngularJS, REST APIs, HTML, and CSS / LESS.

Frontend Developer — Fruitware

2012 – 2013 · Chişinău, Moldova

- Developed responsive web interfaces and JavaScript applications using AngularJS, REST APIs, HTML, and CSS / LESS.

EDUCATION

Master's Degree — Software Technology Products

Moldova State University · 2012 – 2014

Bachelor's Degree — Informational Management

Moldova State University · 2005 – 2009

CERTIFICATION

Digital Accessibility School — Accessibility Unity

Sep – Dec 2023
